CSWC Operational Period Summary

1800 March 25 2018 to 0600 March 26 2018

If you live in North America, you probably have coyotes as neighbors. Keep pets indoors and store food and trash to reduce possibilities for conflict, and keep an ear out for their yipping and howling during the hours of dawn, dusk, and night; when they are most active.

WEATHER SYNOPSIS BY REGION

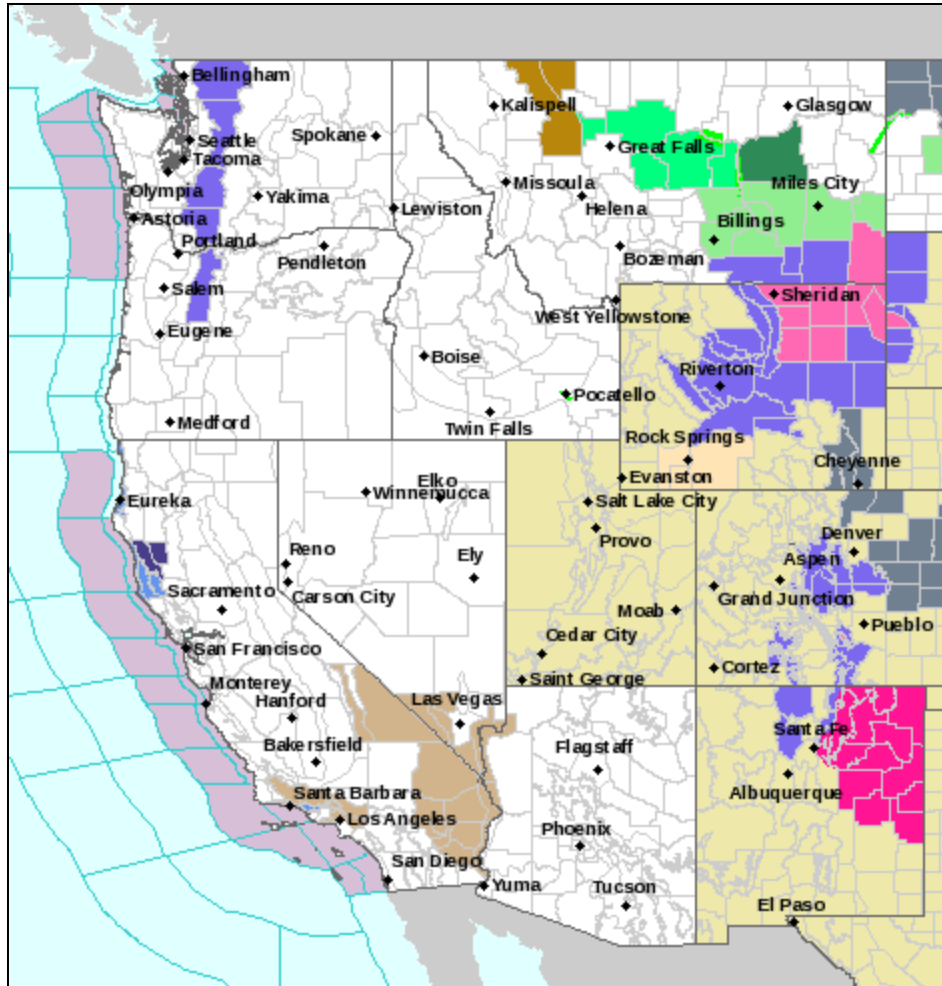

NORTHERN CALIFORNIA

Outside of the few lingering showers in the southeast today, this week looks dry as a Pacific high pressure ridge moves closer to the coast. Stable conditions and abundant spring sunshine will lead to above normal temperatures, and periods of dry gusty northerly winds can also be expected with this pattern.

SOUTHERN CALIFORNIA

This week, expect a warming trend as a high pressure ridge begins to nose into the West Coast. A cutoff low may bring some light offshore flow beginning Tuesday night which may last through Thursday. Temperatures will likely return to the 50s in the mountains to the upper 70s at lower elevations by the middle of next week, but onshore flow may result in cooling toward next weekend. No significant precipitation is expected to occur next week and beyond.
